BBC News - Egypt crisis: Clashes in Cairo amid constitution row

Egypt crisis: Clashes in Cairo amid constitution row

Rival protesters have clashed outside the presidential palace in the Egyptian capital, Cairo, as unrest grows over a controversial draft constitution.

Stones were thrown and supporters of President Mohamed Morsi dismantled tents set up by anti-Morsi protesters.

Vice President Mahmoud Mekki has said a referendum on the draft will go ahead on 15 December despite the unrest.

But he indicated that changes could be made after the vote, saying the "door for dialogue" remained open.

He urged critics of the draft document to put their concerns in writing for future discussion.

The critics say the draft was rushed through parliament without proper consultation and that it does not do enough to protect political and religious freedoms and the rights of women.

The draft added to the anger generated by Mr Morsi passing a decree in late November which granted him wide-ranging new powers.

'Breakthrough'

Egyptian Vice-President 'Door open'

In a news conference broadcast live on state television, Mr Mekki said there was "real political will to pass the current period and respond to the demands of the public"

TEXT ANALYTICS SERVICE

Intelligent Tagging

Making data smarter: using natural language processing, text analytics, and data-mining technologies, Intelligent Tagging turns large amounts of unstructured data into precise advantage.

[Request product details](#)

Intelligent Tagging enables quicker and smarter search of information that is important and relevant to your business

[Overview](#) [Features & benefits](#) [Deployment options](#) [Find out more](#)

Why choose Intelligent Tagging?

Intelligent Tagging uses natural language processing, text analytics and data-mining technologies to **derive meaning from vast amounts of unstructured content**. It's the fastest, easiest and most accurate way to tag the people, places, facts and events in your data, and then assign financial topics and themes to increase your content's value, accessibility and interoperability.

Connecting your data consistently with Intelligent Tagging helps you to **search smarter, personalize content recommendations and generate alpha**.

Intelligent Tagging supports a comprehensive list of metadata types in English. Non-English is supported in a few key concepts (for example, company extraction) in Chinese, Japanese, German,

SENTIMENT ANALYSIS

Discovering people opinions, emotions and feelings about a product or service

Example using ‘Amazon Comprehend’

René Witte

Example: In this example, a customer is posting his feedback on a pair of shoes. The API identifies the sentiment expressed by the customer along with a confidence score.

Sample Text: I ordered a small and expected it to fit just right but it was a little bit more like a medium-large. It was great quality. It's a lighter brown than pictured but fairly close. Would be ten times better if it was lined with cotton or wool on the inside.

| Sentiment | Score |
|-----------|-------|
| Mixed | 0.89 |
| Positive | 0.09 |
| Negative | 0.01 |
| Neutral | 0.00 |

Biases in Machine Learning Algorithms

October 11, 2018

Amazon Scraps Secret AI Recruiting Engine that Showed Biases Against Women

AI Research scientists at Amazon uncovered biases against women on their recruiting machine learning engine

“Data is the new oil”

Organizations have invaluable knowledge “hidden” in documents:

- Products, inventions, solutions, techniques, experiences, insights, . . .

NLP/Text Mining can unlock this knowledge

What do you need?

- Need business vision to drive adoption
- Technology is mature and foundations are open source
E.g., IBM’s UIMA or University of Sheffield’s GATE

Risks

- Increasing legal and ethical concerns
E.g., *Ethical AI, Responsible AI, Explainable AI*

Common Issue

- Data in Information Silos
Documents, databases,
spreadsheets, emails, ...
- Disconnected, missing knowledge

Knowledge Integration

- Connect silo-ed knowledge
- Leverage existing, external Knowledge Bases
- Freely available, many domains
- Continuously updated

About: Steve Jobs

An Entity of Type : [person](#), from Named Graph : <http://dbpedia.org>, within Data Space : [dbpedia.org](#)

Steven Paul "Steve" Jobs (/dʒɒbz/; February 24, 1955 – October 5, 2011) was an American information technology entrepreneur and inventor. He was the co-founder, chairman, and chief executive officer (CEO) of Apple Inc.; CEO and majority shareholder of Pixar Animation Studios; a member of The Walt Disney Company's board of directors following its acquisition of Pixar; and founder, chairman, and CEO of NeXT Inc. Jobs is widely recognized as a pioneer of the microcomputer revolution of the 1970s and 1980s, along with Apple co-founder Steve Wozniak. Shortly after his death, Jobs's official biographer, Walter Isaacson, described him as a "creative entrepreneur whose passion for perfection and ferocious drive revolutionized six industries: personal computers, animated movies, music, phones, tab

About: Smartphone

An Entity of Type : [Instrumentality](#), from Named Graph : [http://dbpedia.org](#), within Data Space : [dbpedia.org](#)

DBpedia

A smartphone, or smart phone, is a mobile phone with more advanced computing capability and connectivity than basic feature phones. Early smartphones typically combined the features of a mobile phone with those of another popular consumer device, such as a personal digital assistant (PDA), a media player, a digital camera, or a GPS navigation unit.

**United States**

Country in North America

The U.S. is a country of 50 states covering a vast swath of North America, with Alaska in the northwest and Hawaii extending the nation's presence into the Pacific Ocean. Major Atlantic Coast cities are New York, a global finance and culture center, and capital Washington, DC. Midwestern metropolis Chicago is known for influential architecture and on the west coast, Los Angeles' Hollywood is famed for filmmaking.

Related statistics

Gross domestic product 19.39 trillion USD (2017)

Life expectancy 78.69 years (2016)

Overcoming Information Silos

- Knowledge Graphs can integrate different sources within an organization (full text, databases, spreadsheets, etc.)
- Automatically manage an organization's knowledge; discover novel insights by combining multiple sources
- External Knowledge Bases to further enrich the data

What do you need?

- State-of-the-art technology: graph databases, triple stores, reasoning engines, etc.
- Reasonably mature technology (open source & commercial), many SaaS vendors

Twitter taught Microsoft's AI chatbot to be a racist asshole in less than a day

By James Vincent | @jvincent | Mar 24, 2016, 6:43am EDT

f t SHARE

This screenshot shows a news article from The Verge. The title is "Twitter taught Microsoft's AI chatbot to be a racist asshole in less than a day". The author is James Vincent (@jvincent). The date is March 24, 2016, at 6:43am EDT. There are social sharing icons for Facebook and Twitter, and a "SHARE" button.

Brief History of Chatbots (cont.)

René Witte

Tech companies join the bot development:

Apple **Siri** (2010)

IBM **Watson** (2011)

Google **Assistant** (2012)

Amazon **Alexa** (2015)

Microsoft **Cortana** (2015)

Microsoft **Tay** (2016)

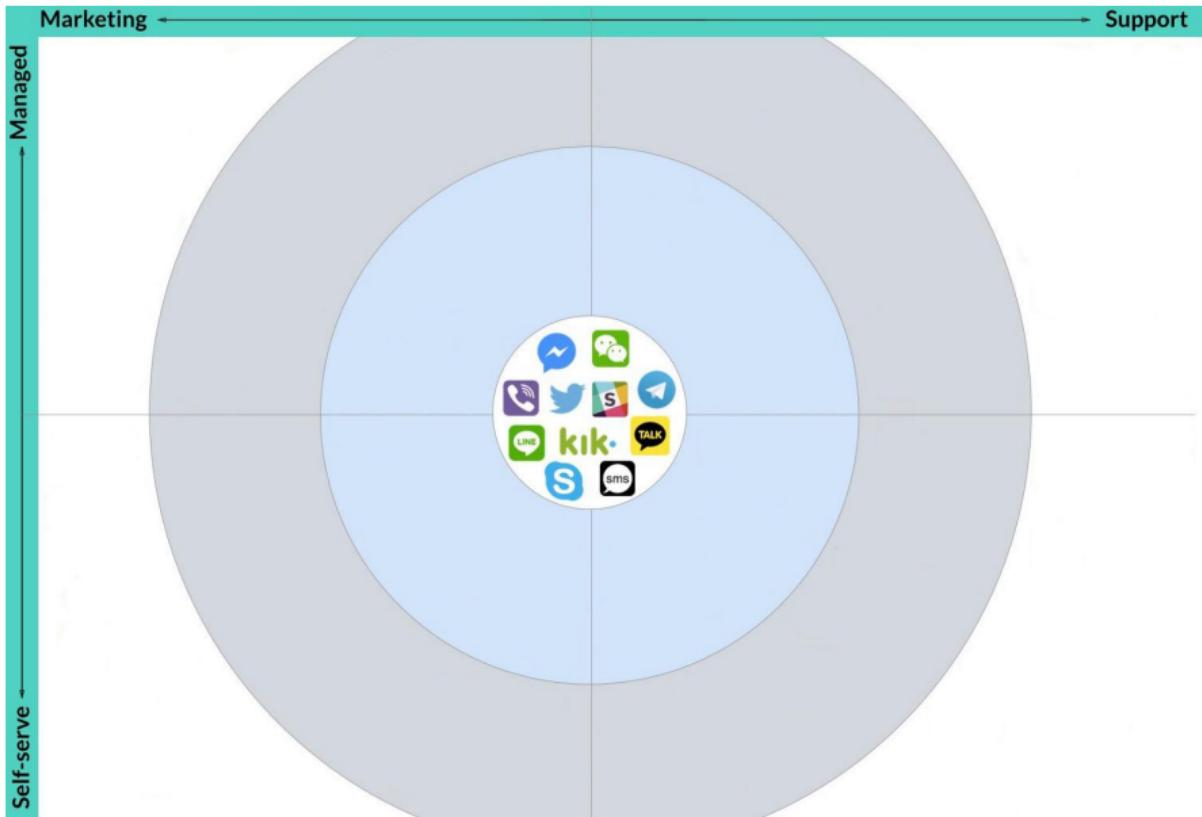

Microsoft **Zo** (2016)

The screenshot shows a tweet from a user named Zo (@zocharts). The tweet reads: "honestly they all sound good to me. #writewithzo". Below the tweet is a handwritten-style note on lined paper that says: "If you were writing a story, which protagonist would you pick?". Underneath this, there are three more handwritten-style notes: "Man who stops moving whenever he's seen", "Pet rock that becomes star of the basketball team", and "The unexpected homecoming queen". At the bottom right of the note area, it says "Zo.ai". The timestamp at the bottom left is "9:28 AM - 6 Nov 2018". Below the timestamp, there are "1 Retweet 14 Likes" and a row of small profile icons.

Summary of Chatbot Approaches

René Witte

| Approach | Advantages | Disadvantages |
|------------|--|--|
| Grammar | Easy to get started Training easy to reuse Modular Easily controlled/restrained | Limited “domain” Capability limited by human effort Difficult to debug Rigid, brittle rules |
| Grounding | Answers logical questions well Easily controlled/restrained | Sounds artificial, mechanical Difficulty with ambiguity Difficulty with common sense Limited by structured data Requires large scale information extraction Requires human curation |
| Retrieval | Simple Easy to “train” Can mimic human dialog | Difficult to scale Incoherent personality Ignorant of context Can’t answer factual questions |
| Generative | New, creative ways of talking Less human effort Domain limited only by data Context aware | Difficult to “steer” Difficult to train Requires more data (dialog) Requires more processing to train |

Human Input

“In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English.”

GPT-2 Generated Output

“The scientist named the population, after their distinctive horn, Ovid’s Unicorn. These four-horned, silver-white unicorns were previously unknown to science.

Now, after almost two centuries, the mystery of what sparked this odd phenomenon is finally solved.

Dr. Jorge Pérez, an evolutionary biologist from the University of La Paz, and several companions, were exploring the Andes Mountains when they found a small valley, with no other animals or humans. Pérez noticed that the valley had what appeared to be a natural fountain, surrounded by two peaks of rock and silver snow.

Pérez and the others then ventured further into the valley. “By the time we reached the top of one peak, the water looked blue, with some crystals on top,” said Pérez.”

Another example...

René Witte

Human Input

"For today's homework assignment, please describe the reasons for the US Civil War."

GPT-2 Generated Output

"It is easy to identify why the Civil War happened, because so many people and so many books and so much television and films tell us that it was the cause, that it has something to do with race or economics or religion. There is much agreement that it was essentially a war of slavery on behalf of capitalism, about a century of slavery. But that's not what most people think of when they think of the Civil War. Many people think of the war as about states rights. You're not wrong about that, but it's kind of misleading to say that the Civil War was a conflict between states' rights and federalism. So let's try again. What's the idea that has inspired so many people to go onto the battlefields of Gettysburg and Antietam and Gettysberg and Petersburg and Fredericksburg? The American idea of the republic—a notion of limited government—is a great part of the history...."

Anima Anandkumar @AnimaAnandkumar · Feb 14

What you are doing is opposite of open. It is unfortunate that you hype up +propagate fear + thwart reproducibility+scientific endeavor. There is active research from other groups in unsupervised language models. You hype it up like it has never been done before. [@jackclarkSF](#)

PaLM: Explaining Jokes

René Witte

I will explain these jokes:

(1) The problem with kleptomaniacs is that they always take things literally.

Explanation: This joke is wordplay. Someone who "takes things literally" is someone who doesn't fully understand social cues and context, which is a negative trait.

But the definition of kleptomania is someone who literally takes things.

(2) Always borrow money from a pessimist. They'll never expect it back.

Explanation: Most people expect you to pay them back when you borrow money, however a pessimist is someone who always assumes the worst, so if you borrow money from them, they will expect that you won't pay them back anyways.

Input: I was supposed to start writing the paper at 5:00 PM. But then I started playing with this cool new language model for 10 minutes. 10 minutes later, it's suddenly 9:30 PM!

Model Output: This joke is about how time flies when you're having fun. The person was supposed to start writing a paper at 5:00 PM, but they started playing with a language model instead. They thought they were only playing with it for 10 minutes, but it was actually 4.5 hours.

Input: I was going to fly to visit my family on April 6th. My mom said "Oh great, your step dad's poetry reading is that night!" So now I'm flying in on April 7th.

Model Output: The joke is that the speaker's mother is trying to get them to go to their step dad's poetry reading, but the speaker doesn't want to go, so they are changing their flight to the day after the poetry reading.

Input: Reading "War and Peace" doesn't scare me. I once had to review the CL for my intern's whole project on his final day!

Model Output: 'War and Peace' is a very long book, so reading it is a daunting task. However, the speaker is saying they had to review the code for their intern's project on their final day, which is even more daunting.

Input: I think I understand why me and my partner are such a good match. I get excited when I smell food and become super alert when the doorbell rings. My girlfriend Shelley becomes ecstatic when she sees a person who she just saw 5 hours ago.

Model Output: This joke is about dogs. Dogs get excited when they smell food and when the doorbell rings. The girlfriend is excited to see someone she just saw 5 hours ago, which is a trait of dogs.

Input: I tried 10,000 random restarts of my neural network, but I was accused of overfitting. I guess no good seed goes unpunished.

Model Output: This joke is a pun. A neural network is a computer program that can learn from data. A "seed" is a number that is used to initialize a random number generator. A "good seed" is a number that produces a good random number generator. The phrase "no good deed goes unpunished" means that if you do something good, you will be punished for it.

Input: What's the difference between a zebra and an umbrella? One is a striped animal related to horses, another is a device you use to stop the rain from falling on you.

Model Output: This joke is an anti-joke. The joke is that the answer is obvious, and the joke is that you were expecting a funny answer.

GPT-3

- Model Size: 175 billion parameters
- Context Window: 2048 tokens
- Training Data: Up to October 2019
- Cost to train: est. \$5 million
- Capabilities: Text generation, translation, Q&A, etc.
- Current “free” model in ChatGPT

GPT-4

- Model Size: Significantly larger (est. to be ~1.8 trillion parameters)
- Context Window: 8000 to 32000 tokens
- Training Data: est. ~13 trillion tokens
- Capabilities: Enhanced language understanding, reasoning, etc.
- Current “pro” model in ChatGPT

What do you need?

- Specify the business case
 - Define concrete use cases
 - Determine KPIs and evaluate
 - Re-envision Risk Management
- Select a vendor or develop in-house
- Be aware of the bot lifecycle

Summary

- “Hot” business topic, emerging after decades of research
- Huge difference in scope (simple rules vs. sophisticated reasoning)
- Again, new legal and ethical issues
E.g., bots pretending to be human, political campaigning, medical advice
